

Project plan

Introduction about the project

The project

The company DuelSys inc. wants a software solution to manage their sport tournaments. I, Tihomir KandeV, am stepping in to develop an administrative system that will solve the management problems of the company.

Client

DuelSys inc. is company with customers that are sport associations.

Team

I am Tihomir KandeV. My contact email is 483777@student.fontys.nl.

Current situation

Until this point the company has never had system for tournament management.

Problem description

The main problem, that the client faces, is the management. There are a lot of things to handle like the results of the games and scheduling of the tournaments, also managing tournaments them selves. Another problem is viewing leaderboards of the tournaments. The last problem is the lack of website for the players to log in and view or register for tournament.

Project goal

My desired result is properly working website and application. The final project should be an efficient system that is going to solve the management problems of "DuelSys" for both employees and players.

Deliverables

- Website for the players where they can login and see and register for tournaments.
- Desktop application for the staff.

- URS (User Requirements Specifications) – document that describes what the users require from the system
- Test plan

Non – deliverables

- Process report

Constraints

- The time I got is 6 weeks

Phasing
